## **Lecture 13:** Generative Models

Fei-Fei Li, Ehsan Adeli

Lecture 13 - 1 May 16, 2024

### Administrative

- A3 is out. Due May 28.
- Milestone was due May 17<sup>th</sup> (pay attention to the date)
  - Read website page for milestone requirements.
  - Need to Finish data preprocessing and initial results by then.

Lecture 13 -

2

May 16, 2024

• Midterm and A2 grades will be out this week

**Supervised Learning** 

**Data**: (x, y) x is data, y is label

**Goal**: Learn a function to map x -> y

**Examples**: Classification, regression, object detection, semantic segmentation, image captioning, etc.

#### Fei-Fei Li, Ehsan Adeli

#### Lecture 13 - 3 May 16, 2024

**Supervised Learning** 

**Data**: (x, y) x is data, y is label

**Goal**: Learn a function to map x -> y

**Examples**: Classification, regression, object detection, semantic segmentation, image captioning, etc.

Classification

#### **Supervised Learning**

**Data**: (x, y) x is data, y is label

**Goal**: Learn a function to map x -> y

**Examples**: Classification, regression, object detection, semantic segmentation, image captioning, etc.

A cat sitting on a suitcase on the floor

#### Image captioning

Caption generated using <u>neuraltalk2</u> <u>Image</u> is <u>CC0 Public domain</u>.

#### Fei-Fei Li, Ehsan Adeli

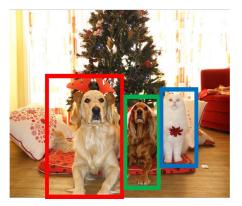

#### Lecture 13 - 5 May 16, 2024

#### **Supervised Learning**

**Data**: (x, y) x is data, y is label

**Goal**: Learn a function to map x -> y

**Examples**: Classification, regression, object detection, semantic segmentation, image captioning, etc.

#### DOG, DOG, CAT

**Object Detection** 

This image is CC0 public domain

#### Fei-Fei Li, Ehsan Adeli

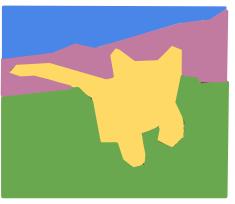

#### Lecture 13 - 6 May 16, 2024

#### **Supervised Learning**

**Data**: (x, y) x is data, y is label

**Goal**: Learn a function to map x -> y

**Examples**: Classification, regression, object detection, semantic segmentation, image captioning, etc.

GRASS, CAT, TREE, SKY

Semantic Segmentation

#### Fei-Fei Li, Ehsan Adeli

#### Lecture 13 - 7 May 16, 2024

**Unsupervised Learning** 

**Data**: x Just data, no labels!

**Goal**: Learn some underlying hidden structure of the data

**Examples**: Clustering, dimensionality reduction, density estimation, etc.

#### Fei-Fei Li, Ehsan Adeli

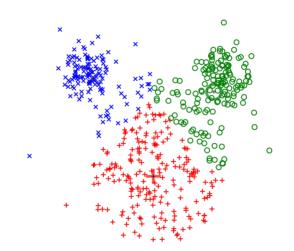

#### Lecture 13 - 8 May 16, 2024

**Unsupervised Learning** 

**Data**: x Just data, no labels!

**Goal**: Learn some underlying hidden structure of the data

**Examples**: Clustering, dimensionality reduction, density estimation, etc.

K-means clustering

This image is CC0 public domain

#### Fei-Fei Li, Ehsan Adeli

#### Lecture 13 - 9 May 16, 2024

**Unsupervised Learning** 

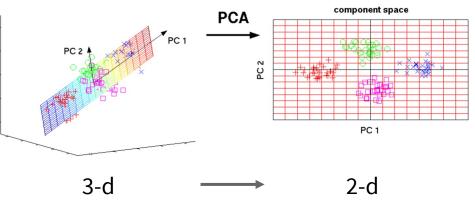

**Data**: x Just data, no labels!

**Goal**: Learn some underlying hidden structure of the data

**Examples**: Clustering, dimensionality reduction, density estimation, etc.

original data space

Lecture 13 -

Principal Component Analysis (Dimensionality reduction)

1-d density estimation

#### Fei-Fei Li, Ehsan Adeli

#### Lecture 13 - 11 May 16, 2024

#### **Supervised Learning**

**Data**: (x, y) x is data, y is label

**Goal**: Learn a function to map x -> y

**Examples**: Classification, regression, object detection, semantic segmentation, image captioning, etc.

#### Unsupervised Learning

**Data**: x Just data, no labels!

**Goal**: Learn some underlying hidden structure of the data

**Examples**: Clustering, dimensionality reduction, density estimation, etc.

#### Fei-Fei Li, Ehsan Adeli

#### Lecture 13 - 12 May 16, 2024

**Supervised Learning** 

**Data**: (x, y) x is data, y is label

**Goal**: Learn a function to map x -> y

**Examples**: Classification, regression, object detection, semantic segmentation, image captioning, etc.

#### **Unsupervised Learning**

**Data**: x Just data, no labels!

**Goal**: Learn some underlying hidden structure of the data

**Examples**: Clustering, dimensionality reduction, density estimation, etc.

#### Self-Supervised Learning

**Data**: (x, pseudo generated y) No manual labels!

**Goal**: Learn to generate good features (reduce the data to useful/generic features)

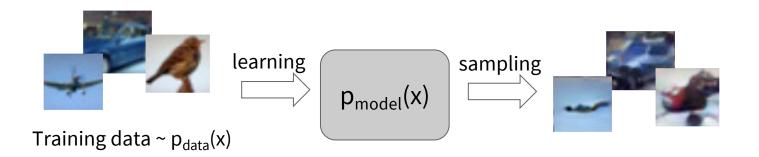

**Example**: Classification in downstream applications where we have limited data

#### Fei-Fei Li, Ehsan Adeli

#### Lecture 13 - 13 May 16, 2024

### **Generative Modeling**

Given training data, generate new samples from same distribution

#### **Objectives:**

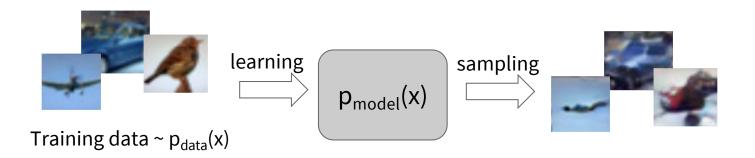

- 1. Learn  $p_{model}(x)$  that approximates  $p_{data}(x)$
- 2. Sampling new x from  $p_{model}(x)$

#### Fei-Fei Li, Ehsan Adeli

#### Lecture 13 - 14 May 16, 2024

### **Generative Modeling**

Given training data, generate new samples from same distribution

Formulate as density estimation problems:

- Explicit density estimation: explicitly define and solve for p<sub>model</sub>(x)
- Implicit density estimation: learn model that can sample from p<sub>model</sub>(x) without explicitly defining it.

#### Fei-Fei Li, Ehsan Adeli

#### Lecture 13 - 15 May 16, 2024

### Why Generative Models?

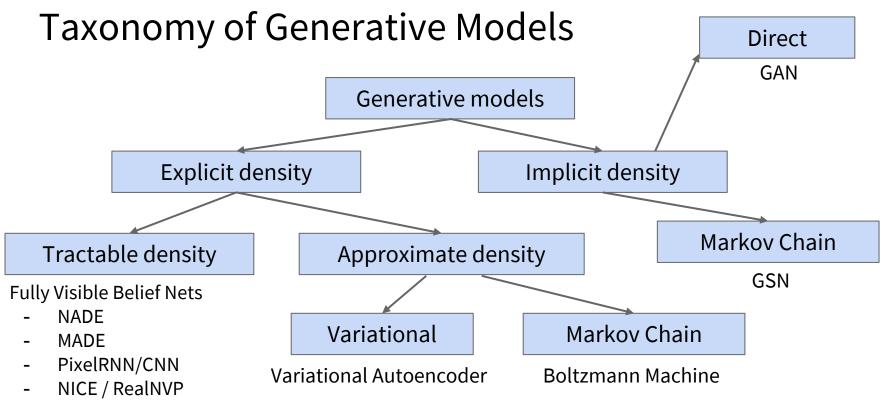

- Realistic samples for artwork, super-resolution, colorization, etc.
- Learn useful features for downstream tasks such as classification.
- Getting insights from high-dimensional data (physics, medical imaging, etc.)
- Modeling physical world for simulation and planning (robotics and reinforcement learning applications)

Lecture 13 - 16

May 16, 2024

#### Lecture 13 - 18 May 16, 2024

# PixelRNN and PixelCNN

(A very brief overview)

Fei-Fei Li, Ehsan Adeli

Lecture 13 - 19 May 16, 2024

### Fully visible belief network (FVBN)

Explicit density model

$$p(x) = p(x_1, x_2, \dots, x_n)$$
  
 $\uparrow$ 
Likelihood of Joint likelihood of each pixel in the image

Fei-Fei Li, Ehsan Adeli

#### Lecture 13 - 20 May 16, 2024

### Fully visible belief network (FVBN)

Explicit density model

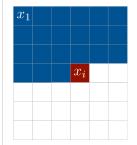

Use chain rule to decompose likelihood of an image x into product of 1-d distributions:

$$p(x) = \prod_{i=1}^{n} p(x_i | x_1, \dots, x_{i-1})$$

Likelihood of image x Probability of i'th pixel value given all previous pixels

Lecture 13 -

- 21

May 16, 2024

Then maximize likelihood of training data

### Fully visible belief network (FVBN)

Explicit density model

Use chain rule to decompose likelihood of an image x into product of 1-d distributions:

 $\sim$ 

$$p(x) = \prod_{i=1}^{n} p(x_i | x_1, \dots, x_{i-1})$$

Likelihood of image x

Probability of i'th pixel value given all previous pixels

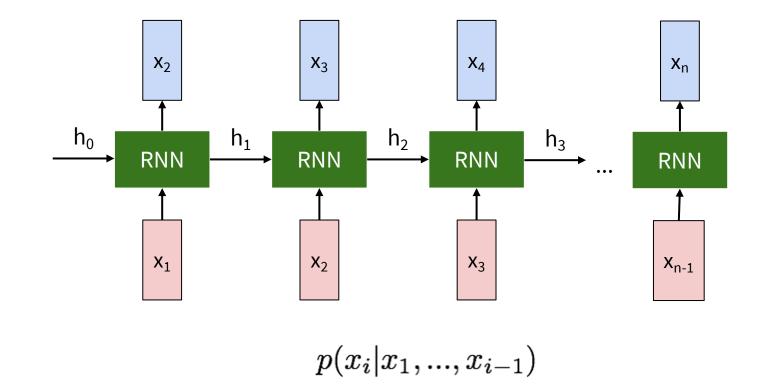

Then maximize likelihood of training data

Complex distribution over pixel values => Express using a neural network!

#### Fei-Fei Li, Ehsan Adeli

#### Lecture 13 - 22 May 16, 2024

### **Recurrent Neural Network**

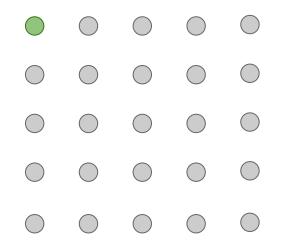

#### Fei-Fei Li, Ehsan Adeli

#### Lecture 13 - 23 May 16, 2024

Generate image pixels starting from corner

Dependency on previous pixels modeled using an RNN (LSTM)

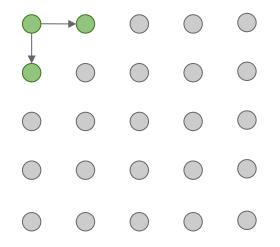

#### Fei-Fei Li, Ehsan Adeli

#### Lecture 13 - 24 May 16, 2024

Generate image pixels starting from corner

Dependency on previous pixels modeled using an RNN (LSTM)

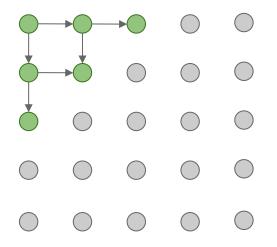

#### Fei-Fei Li, Ehsan Adeli

#### Lecture 13 - 25 May 16, 2024

Generate image pixels starting from corner

Dependency on previous pixels modeled using an RNN (LSTM)

#### Fei-Fei Li, Ehsan Adeli

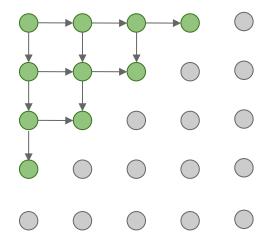

#### Lecture 13 - 26 May 16, 2024

### PixelRNN [van der Oord et al. 2016]

Generate image pixels starting from corner

Dependency on previous pixels modeled using an RNN (LSTM)

Drawback: sequential generation is slow in both training and inference!

#### Fei-Fei Li, Ehsan Adeli

#### Lecture 13 - 27 May 16, 2024

Still generate image pixels starting from corner

Dependency on previous pixels now modeled using a CNN over context region (masked convolution)

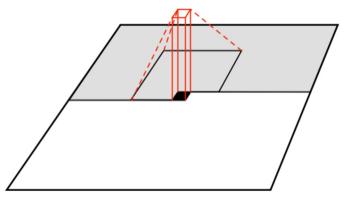

Figure copyright van der Oord et al., 2016. Reproduced with permission.

#### Fei-Fei Li, Ehsan Adeli

#### Lecture 13 - 28 May 16, 2024

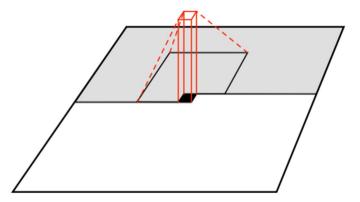

Still generate image pixels starting from corner

Dependency on previous pixels now modeled using a CNN over context region (masked convolution)

Training is faster than PixelRNN (can parallelize convolutions since context region values known from training images)

Generation is still slow: For a 32x32 image, we need to do forward passes of the network 1024 times for a single image

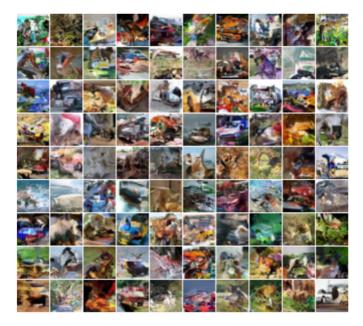

- 29

Lecture 13 -

Figure copyright van der Oord et al., 2016. Reproduced with permission.

May 16, 2024

### **Generation Samples**

32x32 CIFAR-10

32x32 ImageNet

Figures copyright Aaron van der Oord et al., 2016. Reproduced with permission.

May 16, 2024

#### Lecture 13 - 30

### **PixelRNN and PixelCNN**

#### Pros:

- Can explicitly compute likelihood p(x)
- Easy to optimize
- Good samples

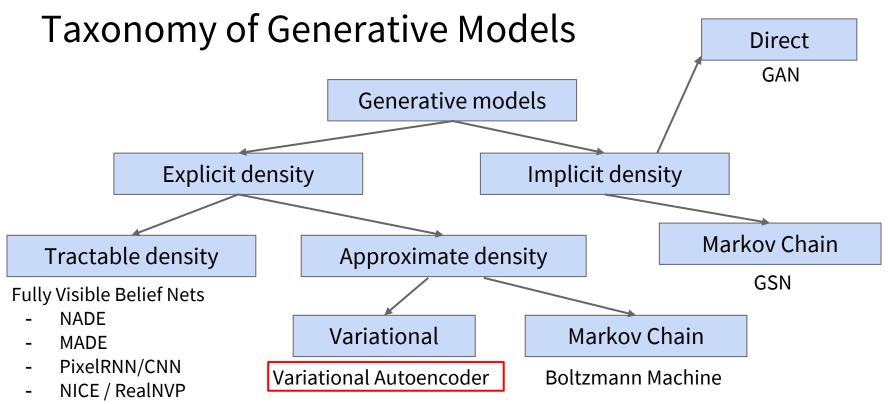

#### Con:

- Sequential generation => slow

Improving PixelCNN performance

- Gated convolutional layers
- Short-cut connections
- Discretized logistic loss
- Multi-scale
- Training tricks
- Etc...
- See
  - Van der Oord et al. NIPS 2016
  - Salimans et al. 2017 (PixelCNN++)

Lecture 13 - 31 May 16, 2024

- Glow

- Ffjord

- 32

May 16, 2024

# Variational Autoencoders (VAE)

Fei-Fei Li, Ehsan Adeli

Lecture 13 - 33 May 16, 2024

So far...

PixelRNN/CNNs define tractable density function, optimize likelihood of training data:  $p_{\theta}(x) = \prod_{i=1}^{n} p_{\theta}(x_i | x_1, ..., x_{i-1})$ 

Fei-Fei Li, Ehsan Adeli

Lecture 13 - 34 May 16, 2024

### So far...

PixelRNN/CNNs define tractable density function, optimize likelihood of training data:  $p_{\theta}(x) = \prod_{i=1}^{n} p_{\theta}(x_i | x_1, ..., x_{i-1})$ 

Variational Autoencoders (VAEs) define intractable density function with latent z:  $p_{\theta}(x) = \int p_{\theta}(z)p_{\theta}(x|z)dz$ 

No dependencies among pixels, can generate all pixels at the same time!

Cannot optimize directly, derive and optimize lower bound on likelihood instead

<u>May 16, 2024</u>

Lecture 13 - 35

### So far...

PixelRNN/CNNs define tractable density function, optimize likelihood of training data:  $p_{\theta}(x) = \prod_{i=1}^{n} p_{\theta}(x_i | x_1, ..., x_{i-1})$ 

Variational Autoencoders (VAEs) define intractable density function with latent z:  $p_{\theta}(x) = \int p_{\theta}(z)p_{\theta}(x|z)dz$ 

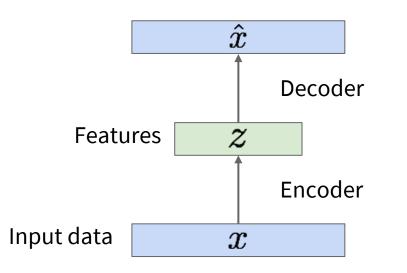

No dependencies among pixels, can generate all pixels at the same time!

Cannot optimize directly, derive and optimize lower bound on likelihood instead Why latent z?

<u>May 16, 2024</u>

Lecture 13 - 36

Unsupervised approach for learning a lower-dimensional feature representation from unlabeled training data

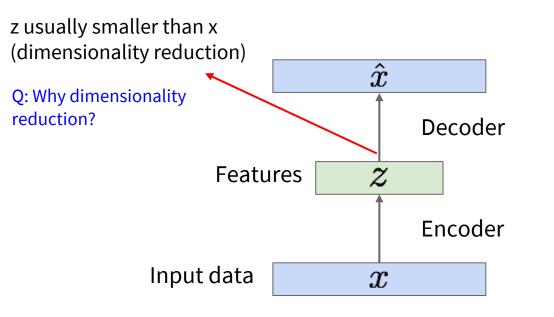

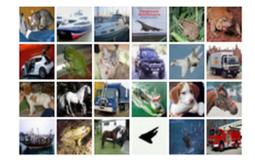

### Fei-Fei Li, Ehsan Adeli

## Lecture 13 - 37 May 16, 2024

Unsupervised approach for learning a lower-dimensional feature representation from unlabeled training data

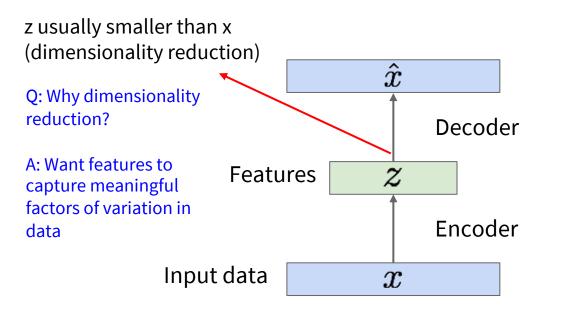

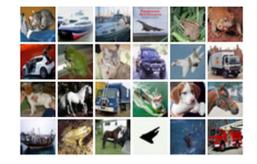

#### Fei-Fei Li, Ehsan Adeli

## Lecture 13 - 38 May 16, 2024

Unsupervised approach for learning a lower-dimensional feature representation from unlabeled training data

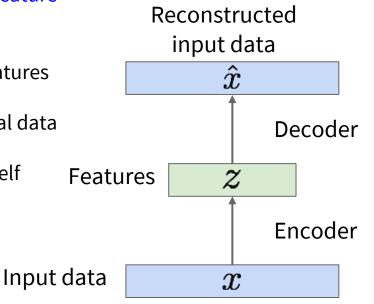

### Fei-Fei Li, Ehsan Adeli

## Lecture 13 - 39 May 16, 2024

How to learn this feature representation?

Train such that features can be used to reconstruct original data "Autoencoding" encoding input itself Fe

Reconstructed data

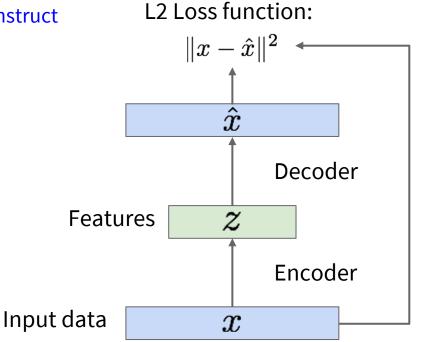

Encoder: 4-layer conv Decoder: 4-layer upconv

#### Fei-Fei Li, Ehsan Adeli

## Lecture 13 - 40 May 16, 2024

Train such that features can be used to reconstruct original data

Doesn't use labels!

#### **Reconstructed data**

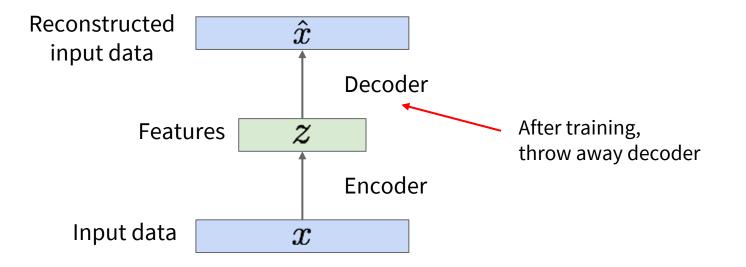

Encoder: 4-layer conv Decoder: 4-layer upconv

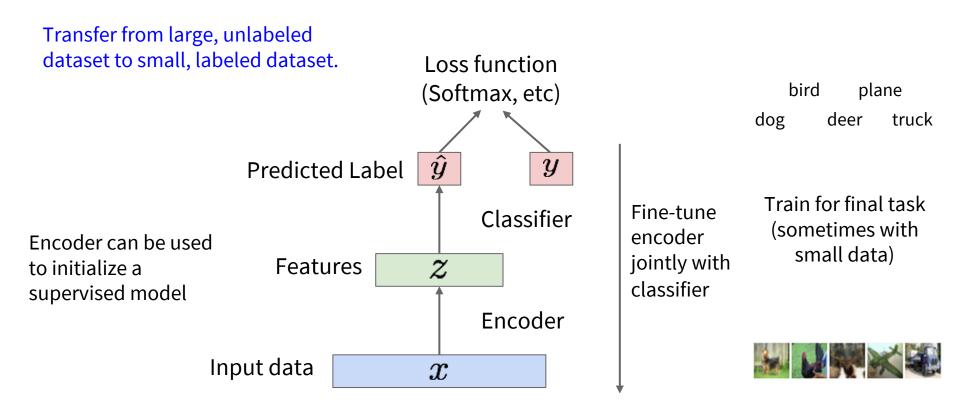

#### Fei-Fei Li, Ehsan Adeli

## Lecture 13 - 41 May 16, 2024

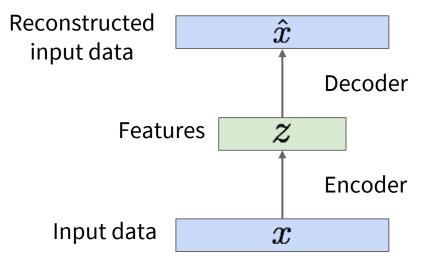

Fei-Fei Li, Ehsan Adeli

### Lecture 13 - 42 May 16, 2024

#### Fei-Fei Li, Ehsan Adeli

## Lecture 13 - 43 May 16, 2024

Autoencoders can reconstruct data, and can learn features to initialize a supervised model

Features capture factors of variation in training data.

But we can't generate new images from an autoencoder because we don't know the space of z.

How do we make autoencoder a generative model?

#### Fei-Fei Li, Ehsan Adeli

## Lecture 13 - 44 May 16, 2024

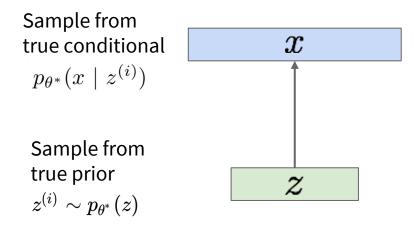

Probabilistic spin on autoencoders - will let us sample from the model to generate data!

Fei-Fei Li, Ehsan Adeli

Lecture 13 - 45 May 16, 2024

Probabilistic spin on autoencoders - will let us sample from the model to generate data!

Assume training data  $\{x^{(i)}\}_{i=1}^N$  is generated from the distribution of unobserved (latent) representation z

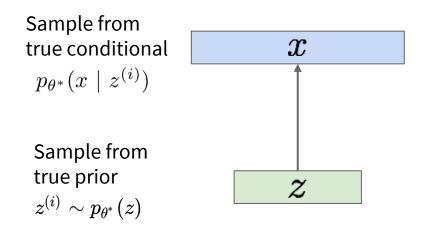

Kingma and Welling, "Auto-Encoding Variational Bayes", ICLR 2014

## Fei-Fei Li, Ehsan Adeli

## Lecture 13 - 46 May 16, 2024

Probabilistic spin on autoencoders - will let us sample from the model to generate data!

Assume training data  $\{x^{(i)}\}_{i=1}^N$  is generated from the distribution of unobserved (latent) representation z

Intuition (remember from autoencoders!): x is an image, z is latent factors used to generate x: attributes, orientation, etc.

Kingma and Welling, "Auto-Encoding Variational Bayes", ICLR 2014

May 16, 2024

Lecture 13 -

## Fei-Fei Li, Ehsan Adeli

We want to estimate the true parameters  $\theta^*$  of this generative model given training data x.

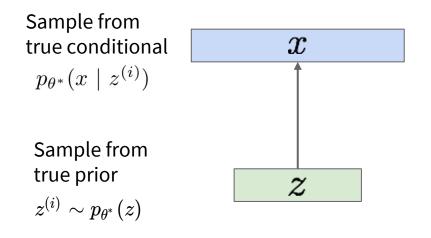

Kingma and Welling, "Auto-Encoding Variational Bayes", ICLR 2014

#### Fei-Fei Li, Ehsan Adeli

## Lecture 13 - 48 May 16, 2024

We want to estimate the true parameters  $\theta^*$  of this generative model given training data x.

How should we represent this model?

Kingma and Welling, "Auto-Encoding Variational Bayes", ICLR 2014

#### Fei-Fei Li, Ehsan Adeli

## Lecture 13 - 49 May 16, 2024

We want to estimate the true parameters  $\theta^*$  of this generative model given training data x.

## How should we represent this model?

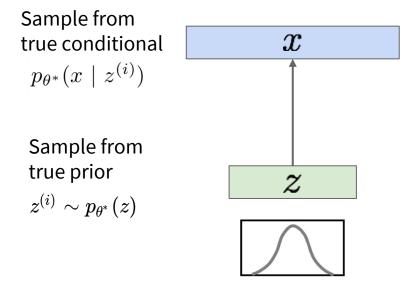

Choose prior p(z) to be simple, e.g. Gaussian. Reasonable for latent attributes, e.g. pose, how much smile.

-50

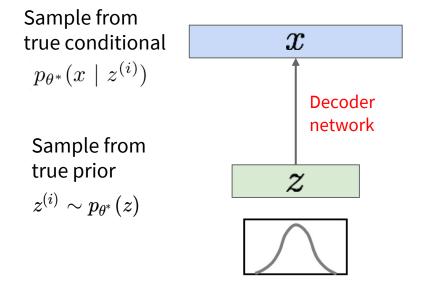

May 16, 2024

Lecture 13 -

#### Fei-Fei Li, Ehsan Adeli

We want to estimate the true parameters  $\theta^*$  of this generative model given training data x.

### How should we represent this model?

Choose prior p(z) to be simple, e.g. Gaussian. Reasonable for latent attributes, e.g. pose, how much smile.

Conditional p(x|z) is complex (generates image) => represent with neural network

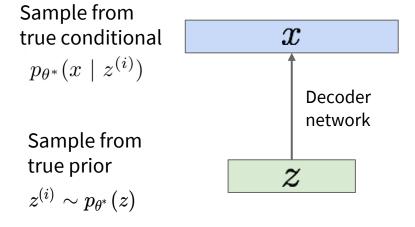

Kingma and Welling, "Auto-Encoding Variational Bayes", ICLR 2014

#### Fei-Fei Li, Ehsan Adeli

## Lecture 13 - 51 May 16, 2024

We want to estimate the true parameters  $\theta^*$  of this generative model given training data x.

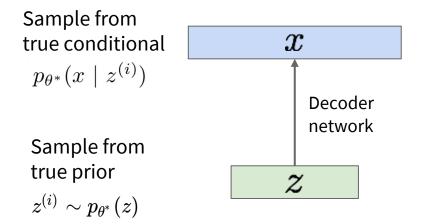

How to train the model?

Kingma and Welling, "Auto-Encoding Variational Bayes", ICLR 2014

#### Fei-Fei Li, Ehsan Adeli

## Lecture 13 - 52 May 16, 2024

We want to estimate the true parameters  $\theta^*$  of this generative model given training data x.

#### How to train the model?

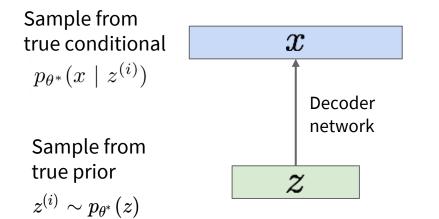

Learn model parameters to maximize likelihood of training data

$$p_{\theta}(x) = \int p_{\theta}(z) p_{\theta}(x|z) dz$$

Kingma and Welling, "Auto-Encoding Variational Bayes", ICLR 2014

#### Fei-Fei Li, Ehsan Adeli

## Lecture 13 - 53 May 16, 2024

We want to estimate the true parameters  $\theta^*$  of this generative model given training data x.

#### How to train the model?

Learn model parameters to maximize likelihood of training data

$$p_{\theta}(x) = \int p_{\theta}(z) p_{\theta}(x|z) dz$$

## Q: What is the problem with this? Intractable!

Kingma and Welling, "Auto-Encoding Variational Bayes", ICLR 2014

#### Fei-Fei Li, Ehsan Adeli

## Lecture 13 - 54 May 16, 2024

# Variational Autoencoders: Intractability

Data likelihood:  $p_{\theta}(x) = \int p_{\theta}(z) p_{\theta}(x|z) dz$ 

Kingma and Welling, "Auto-Encoding Variational Bayes", ICLR 2014

#### Fei-Fei Li, Ehsan Adeli

Lecture 13 - 55 May 16, 2024

# Variational Autoencoders: Intractability Data likelihood: $p_{\theta}(x) = \int p_{\theta}(z)p_{\theta}(x|z)dz$ Simple Gaussian prior

Kingma and Welling, "Auto-Encoding Variational Bayes", ICLR 2014

May 16, 2024

Lecture 13 - 56

#### Fei-Fei Li, Ehsan Adeli

# Variational Autoencoders: Intractability Data likelihood: $p_{\theta}(x) = \int p_{\theta}(z)p_{\theta}(x|z)dz$ Decoder neural network

Kingma and Welling, "Auto-Encoding Variational Bayes", ICLR 2014

#### Fei-Fei Li, Ehsan Adeli

Lecture 13 - 57 May 16, 2024

# Variational Autoencoders: Intractability Data likelihood: $p_{\theta}(x) = \int p_{\theta}(z)p_{\theta}(x|z)dz$ Intractable to compute p(x|z) for every z!

Kingma and Welling, "Auto-Encoding Variational Bayes", ICLR 2014

Lecture 13 - 58

May 16, 2024

#### Fei-Fei Li, Ehsan Adeli

# Variational Autoencoders: Intractability Data likelihood: $p_{\theta}(x) = \int p_{\theta}(z)p_{\theta}(x|z)dz$ Intractable to compute p(x|z) for every z!

$$\log p(x) pprox \log rac{1}{k} \sum_{i=1}^k p(x|z^{(i)}),$$
 where  $z^{(i)} \sim p(z)$ 

Monte Carlo estimation is too high variance

Kingma and Welling, "Auto-Encoding Variational Bayes", ICLR 2014

May 16, 2024

Lecture 13 - 59

#### Fei-Fei Li, Ehsan Adeli

# Variational Autoencoders: Intractability Data likelihood: $p_{\theta}(x) = \int p_{\theta}(z)p_{\theta}(x|z)dz$

Posterior density:  $p_{\theta}(z|x) = p_{\theta}(x|z)p_{\theta}(z)/p_{\theta}(x)$ 

Intractable data likelihood

Kingma and Welling, "Auto-Encoding Variational Bayes", ICLR 2014

#### Fei-Fei Li, Ehsan Adeli

## Lecture 13 - 60 May 16, 2024

# Variational Autoencoders: Intractability

Data likelihood:  $p_{\theta}(x) = \int p_{\theta}(z) p_{\theta}(x|z) dz$ 

Posterior density also intractable:  $p_{ heta}(z|x) = p_{ heta}(x|z)p_{ heta}(z)/p_{ heta}(x)$ 

Solution: In addition to modeling  $p_{\theta}(x|z)$ , learn  $q_{\varphi}(z|x)$  that approximates the true posterior  $p_{\theta}(z|x)$ .

Will see that the approximate posterior allows us to derive a lower bound on the data likelihood that is tractable, which we can optimize.

Variational inference is to approximate the unknown posterior distribution from only the observed data x

Kingma and Welling, "Auto-Encoding Variational Bayes", ICLR 2014

May 16, 2024

Lecture 13 - 61

## Fei-Fei Li, Ehsan Adeli

 $\log p_{\theta}(x^{(i)}) = \mathbf{E}_{z \sim q_{\phi}(z|x^{(i)})} \left[\log p_{\theta}(x^{(i)})\right] \quad (p_{\theta}(x^{(i)}) \text{ Does not depend on } z)$ 

Fei-Fei Li, Ehsan Adeli

Lecture 13 - 62 May 16, 2024

$$\log p_{\theta}(x^{(i)}) = \mathbf{E}_{z \sim q_{\phi}(z|x^{(i)})} \left[ \log p_{\theta}(x^{(i)}) \right] \quad (p_{\theta}(x^{(i)}) \text{ Does not depend on } z)$$
Taking expectation wrt. z (using encoder network) will come in handy later

Fei-Fei Li, Ehsan Adeli

## Lecture 13 - 63 May 16, 2024

$$\log p_{\theta}(x^{(i)}) = \mathbf{E}_{z \sim q_{\phi}(z \mid x^{(i)})} \left[ \log p_{\theta}(x^{(i)}) \right] \quad (p_{\theta}(x^{(i)}) \text{ Does not depend on } z)$$
$$= \mathbf{E}_{z} \left[ \log \frac{p_{\theta}(x^{(i)} \mid z) p_{\theta}(z)}{p_{\theta}(z \mid x^{(i)})} \right] \quad (\text{Bayes' Rule})$$

### Fei-Fei Li, Ehsan Adeli

## Lecture 13 - 64 May 16, 2024

$$\log p_{\theta}(x^{(i)}) = \mathbf{E}_{z \sim q_{\phi}(z|x^{(i)})} \left[ \log p_{\theta}(x^{(i)}) \right] \quad (p_{\theta}(x^{(i)}) \text{ Does not depend on } z)$$
$$= \mathbf{E}_{z} \left[ \log \frac{p_{\theta}(x^{(i)} \mid z)p_{\theta}(z)}{p_{\theta}(z \mid x^{(i)})} \right] \quad (\text{Bayes' Rule})$$
$$= \mathbf{E}_{z} \left[ \log \frac{p_{\theta}(x^{(i)} \mid z)p_{\theta}(z)}{p_{\theta}(z \mid x^{(i)})} \frac{q_{\phi}(z \mid x^{(i)})}{q_{\phi}(z \mid x^{(i)})} \right] \quad (\text{Multiply by constant})$$

Fei-Fei Li, Ehsan Adeli

Lecture 13 - 65 May 16, 2024

$$\log p_{\theta}(x^{(i)}) = \mathbf{E}_{z \sim q_{\phi}(z|x^{(i)})} \left[\log p_{\theta}(x^{(i)})\right] \quad (p_{\theta}(x^{(i)}) \text{ Does not depend on } z)$$

$$= \mathbf{E}_{z} \left[\log \frac{p_{\theta}(x^{(i)} \mid z)p_{\theta}(z)}{p_{\theta}(z \mid x^{(i)})}\right] \quad (\text{Bayes' Rule})$$

$$= \mathbf{E}_{z} \left[\log \frac{p_{\theta}(x^{(i)} \mid z)p_{\theta}(z)}{p_{\theta}(z \mid x^{(i)})} \frac{q_{\phi}(z \mid x^{(i)})}{q_{\phi}(z \mid x^{(i)})}\right] \quad (\text{Multiply by constant})$$

$$= \mathbf{E}_{z} \left[\log p_{\theta}(x^{(i)} \mid z)\right] - \mathbf{E}_{z} \left[\log \frac{q_{\phi}(z \mid x^{(i)})}{p_{\theta}(z)}\right] + \mathbf{E}_{z} \left[\log \frac{q_{\phi}(z \mid x^{(i)})}{p_{\theta}(z \mid x^{(i)})}\right] \quad (\text{Logarithms})$$

Fei-Fei Li, Ehsan Adeli

## Lecture 13 - 66 May 16, 2024

$$\log p_{\theta}(x^{(i)}) = \mathbf{E}_{z \sim q_{\phi}(z|x^{(i)})} \left[\log p_{\theta}(x^{(i)})\right] \quad (p_{\theta}(x^{(i)}) \text{ Does not depend on } z)$$

$$= \mathbf{E}_{z} \left[\log \frac{p_{\theta}(x^{(i)} \mid z)p_{\theta}(z)}{p_{\theta}(z \mid x^{(i)})}\right] \quad (\text{Bayes' Rule})$$

$$= \mathbf{E}_{z} \left[\log \frac{p_{\theta}(x^{(i)} \mid z)p_{\theta}(z)}{p_{\theta}(z \mid x^{(i)})} \frac{q_{\phi}(z \mid x^{(i)})}{q_{\phi}(z \mid x^{(i)})}\right] \quad (\text{Multiply by constant})$$

$$= \mathbf{E}_{z} \left[\log p_{\theta}(x^{(i)} \mid z)\right] - \mathbf{E}_{z} \left[\log \frac{q_{\phi}(z \mid x^{(i)})}{p_{\theta}(z)}\right] + \mathbf{E}_{z} \left[\log \frac{q_{\phi}(z \mid x^{(i)})}{p_{\theta}(z \mid x^{(i)})}\right] \quad (\text{Logarithms})$$

$$= \mathbf{E}_{z} \left[\log p_{\theta}(x^{(i)} \mid z)\right] - D_{KL}(q_{\phi}(z \mid x^{(i)}) \mid |p_{\theta}(z)) + D_{KL}(q_{\phi}(z \mid x^{(i)}) \mid |p_{\theta}(z \mid x^{(i)}))$$
The expectation wrt. z (using encoder network) let us write nice KL terms

### Fei-Fei Li, Ehsan Adeli

## Lecture 13 - 67 May 16, 2024

$$\begin{split} \log p_{\theta}(x^{(i)}) &= \mathbf{E}_{z \sim q_{\phi}(z \mid x^{(i)})} \left[ \log p_{\theta}(x^{(i)}) \right] & (p_{\theta}(x^{(i)}) \text{ Does not depend on } z) \\ &= \mathbf{E}_{z} \left[ \log \frac{p_{\theta}(x^{(i)} \mid z) p_{\theta}(z)}{p_{\theta}(z \mid x^{(i)})} \right] & (\text{Bayes' Rule}) \\ &= \mathbf{E}_{z} \left[ \log \frac{p_{\theta}(x^{(i)} \mid z) p_{\theta}(z)}{p_{\theta}(z \mid x^{(i)})} \frac{q_{\phi}(z \mid x^{(i)})}{q_{\phi}(z \mid x^{(i)})} \right] & (\text{Multiply by constant}) \\ &= \mathbf{E}_{z} \left[ \log p_{\theta}(x^{(i)} \mid z) \right] - \mathbf{E}_{z} \left[ \log \frac{q_{\phi}(z \mid x^{(i)})}{p_{\theta}(z)} \right] + \mathbf{E}_{z} \left[ \log \frac{q_{\phi}(z \mid x^{(i)})}{p_{\theta}(z \mid x^{(i)})} \right] & (\text{Logarithms}) \\ &= \mathbf{E}_{z} \left[ \log p_{\theta}(x^{(i)} \mid z) \right] - D_{KL}(q_{\phi}(z \mid x^{(i)}) \mid p_{\theta}(z)) + D_{KL}(q_{\phi}(z \mid x^{(i)}) \mid p_{\theta}(z \mid x^{(i)})) \right] \\ &\uparrow \\ \text{Decoder network gives } p_{\theta}(x \mid z), \text{ can} \\ \text{compute estimate of this term through} \\ \text{sampling (need some trick to differentiate through sampling).} \\ &\uparrow \\ \text{This KL term (between constant of the term through sampling)} \\ \text{solution!} \\ \text{This NL term (between constant of the term through sampling)} \\ \text{Solution!} \\ \text{This NL term (between constant of the term through sampling)} \\ \text{This NL term (between constant of the term through sampling)} \\ \text{This NL term (between constant of the term through sampling)} \\ \text{This NL term (between constant of the term through sampling)} \\ \text{This NL term (between constant of the term through sampling)} \\ \text{This NL term (between constant of the term through sampling)} \\ \text{This NL term (between constant of the term through sampling)} \\ \text{This NL term (between constant of the term through sampling)} \\ \text{This NL term (between constant of the term through sampling)} \\ \text{This NL term (between constant of the term through sampling)} \\ \text{This NL term (between constant of the term through sampling)} \\ \text{This NL term (between constant of the term through sampling)} \\ \text{This NL term (between constant of the term through sampling)} \\ \text{This NL term (between constant of the term through sampling)} \\ \text{This NL term (between constant of the term through sampling)} \\ \text{This NL term (between constant of the term the term the te$$

### Fei-Fei Li, Ehsan Adeli

## Lecture 13 - 68 May 16, 2024

$$\log p_{\theta}(x^{(i)}) = \mathbf{E}_{z \sim q_{\phi}(z|x^{(i)})} \left[\log p_{\theta}(x^{(i)})\right] \quad (p_{\theta}(x^{(i)}) \text{ Does not depend on } z)$$

$$= \mathbf{E}_{z} \left[\log \frac{p_{\theta}(x^{(i)} | z)p_{\theta}(z)}{p_{\theta}(z | x^{(i)})}\right] \quad (Bayes' \text{ Rule})$$
We want to
maximize the
data
$$= \mathbf{E}_{z} \left[\log \frac{p_{\theta}(x^{(i)} | z)p_{\theta}(z)}{p_{\theta}(z | x^{(i)})} \frac{q_{\phi}(z | x^{(i)})}{q_{\phi}(z | x^{(i)})}\right] \quad (Multiply \text{ by constant})$$
likelihood
$$= \mathbf{E}_{z} \left[\log p_{\theta}(x^{(i)} | z)\right] - \mathbf{E}_{z} \left[\log \frac{q_{\phi}(z | x^{(i)})}{p_{\theta}(z)}\right] + \mathbf{E}_{z} \left[\log \frac{q_{\phi}(z | x^{(i)})}{p_{\theta}(z | x^{(i)})}\right] \quad (Logarithms)$$

$$= \mathbf{E}_{z} \left[\log p_{\theta}(x^{(i)} | z)\right] - D_{KL}(q_{\phi}(z | x^{(i)}) || p_{\theta}(z)) + D_{KL}(q_{\phi}(z | x^{(i)}) || p_{\theta}(z | x^{(i)}))\right]$$
Decoder network gives  $p_{\theta}(x|z)$ , can
compute estimate of this term through
sampling.
$$\uparrow$$
This KL term (between
Gaussians for encoder and z
prior) has nice closed-form
solution!
$$P_{\theta}(z|x) \text{ intractable (saw earlier), can't compute this KL term :(But we know KL divergence
always >= 0.$$

### Lecture 13 - 88 May 16, 2024

Probabilistic spin to traditional autoencoders => allows generating data Defines an intractable density => derive and optimize a (variational) lower bound

Pros:

- Principled approach to generative models
- Interpretable latent space.
- Allows inference of q(z|x), can be useful feature representation for other tasks

Cons:

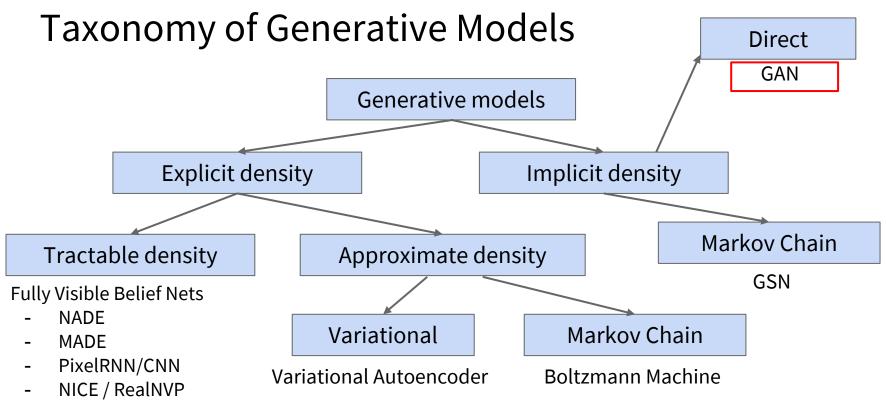

- Maximizes lower bound of likelihood: okay, but not as good evaluation as PixelRNN/PixelCNN
- Samples blurrier and lower quality compared to state-of-the-art (GANs)

Active areas of research:

- More flexible approximations, e.g. richer approximate posterior instead of diagonal Gaussian, e.g., Gaussian Mixture Models (GMMs), Categorical Distributions.
- Learning disentangled representations.

# Generative Adversarial Networks (GANs)

Fei-Fei Li, Ehsan Adeli

Lecture 13 - 91 May 16, 2024

So far...

PixelRNN/CNNs define tractable density function, optimize likelihood of training data:  $p_{\theta}(x) = \prod_{i=1}^{n} p_{\theta}(x_i | x_1, ..., x_{i-1})$ 

VAEs define intractable density function with latent z:

$$p_{ heta}(x) = \int p_{ heta}(z) p_{ heta}(x|z) dz$$

Cannot optimize directly, derive and optimize lower bound on likelihood instead

<u>May 16, 2024</u>

Lecture 13 - 92

So far...

PixelRNN/CNNs define tractable density function, optimize likelihood of training data:  $p_{\theta}(x) = \prod_{i=1}^{n} p_{\theta}(x_i | x_1, ..., x_{i-1})$ 

VAEs define intractable density function with latent z:

$$p_{ heta}(x) = \int p_{ heta}(z) p_{ heta}(x|z) dz$$

Cannot optimize directly, derive and optimize lower bound on likelihood instead

What if we give up on explicitly modeling density, and just want ability to sample?

Lecture 13 -

Minimax objective function:

$$\min_{\theta_g} \max_{\theta_d} \left[ \mathbb{E}_{x \sim p_{data}} \log D_{\theta_d}(x) + \mathbb{E}_{z \sim p(z)} \log(1 - D_{\theta_d}(G_{\theta_g}(z))) \right]$$

Alternate between:

1. Gradient ascent on discriminator

$$\max_{\theta_d} \left[ \mathbb{E}_{x \sim p_{data}} \log D_{\theta_d}(x) + \mathbb{E}_{z \sim p(z)} \log(1 - D_{\theta_d}(G_{\theta_g}(z))) \right]$$

2. Gradient descent on generator

$$\min_{\theta_g} \mathbb{E}_{z \sim p(z)} \log(1 - D_{\theta_d}(G_{\theta_g}(z)))$$

Fei-Fei Li, Ehsan Adeli

#### Lecture 13 - 108 May 16, 2024

Ian Goodfellow et al., "Generative Adversarial Nets", NIPS 2014

Minimax objective function:

$$\min_{\theta_g} \max_{\theta_d} \left[ \mathbb{E}_{x \sim p_{data}} \log D_{\theta_d}(x) + \mathbb{E}_{z \sim p(z)} \log(1 - D_{\theta_d}(G_{\theta_g}(z))) \right]$$

Alternate between:

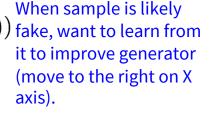

Gradient ascent on discriminator 1.

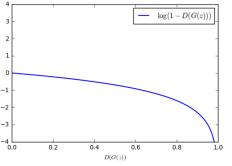

$$\max_{\theta_d} \left[ \mathbb{E}_{x \sim p_{data}} \log D_{\theta_d}(x) + \mathbb{E}_{z \sim p(z)} \log(1 - D_{\theta_d}(G_{\theta_g}(z))) \right]$$

2. Gradient descent on generator

 $\min_{\theta_g} \mathbb{E}_{z \sim p(z)} \log(1 - D_{\theta_d}(G_{\theta_g}(z))) \text{ fake, want to learn from}$ it to improve generator

In practice, optimizing this generator objective does not work well!

#### Fei-Fei Li, Ehsan Adeli

#### Lecture 13 -109 May 16, 2024

# $\min_{\theta_g} \max_{\theta_d} \left[ \mathbb{E}_{x \sim p_{data}} \log D_{\theta_d}(x) + \mathbb{E}_{z \sim p(z)} \log(1 - D_{\theta_d}(G_{\theta_g}(z))) \right]$

Training GANs: Two-player game

Alternate between:

Minimax objective function:

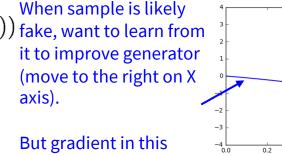

1. Gradient ascent on discriminator

$$\max_{\theta_d} \left[ \mathbb{E}_{x \sim p_{data}} \log D_{\theta_d}(x) + \mathbb{E}_{z \sim p(z)} \log(1 - D_{\theta_d}(G_{\theta_g}(z))) \right]$$

2. Gradient descent on generator

 $\min_{\theta_g} \mathbb{E}_{z \sim p(z)} \log(1 - D_{\theta_d}(G_{\theta_g}(z)))$  When sample is likely it to improve generator (move to the right on X)

In practice, optimizing this generator objective does not work well!

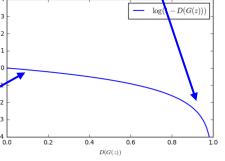

region is relatively flat!

Ian Goodfellow et al., "Generative

Adversarial Nets", NIPS 2014

#### Fei-Fei Li, Ehsan Adeli

### Lecture 13 - 110 May 16, 2024

Ian Goodfellow et al., "Generative Adversarial Nets", NIPS 2014

Minimax objective function:

$$\min_{\theta_g} \max_{\theta_d} \left[ \mathbb{E}_{x \sim p_{data}} \log D_{\theta_d}(x) + \mathbb{E}_{z \sim p(z)} \log(1 - D_{\theta_d}(G_{\theta_g}(z))) \right]$$

Alternate between:

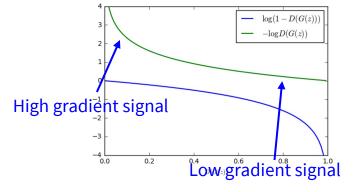

1. Gradient ascent on discriminator

$$\max_{\theta_d} \left[ \mathbb{E}_{x \sim p_{data}} \log D_{\theta_d}(x) + \mathbb{E}_{z \sim p(z)} \log(1 - D_{\theta_d}(G_{\theta_g}(z))) \right]$$

2. Instead: Gradient ascent on generator, different objective

$$\max_{\theta_g} \mathbb{E}_{z \sim p(z)} \log(D_{\theta_d}(G_{\theta_g}(z)))$$

Instead of minimizing likelihood of discriminator being correct, now maximize likelihood of discriminator being wrong. Same objective of fooling discriminator, but now higher gradient signal for bad samples => works much better! Standard in practice.

• Update the discriminator by ascending its stochastic gradient:

$$\nabla_{\theta_d} \frac{1}{m} \sum_{i=1}^m \left[ \log D_{\theta_d}(x^{(i)}) + \log(1 - D_{\theta_d}(G_{\theta_g}(z^{(i)}))) \right]$$

#### end for

- Sample minibatch of m noise samples  $\{z^{(1)}, \ldots, z^{(m)}\}$  from noise prior  $p_g(z)$ .
- Update the generator by ascending its stochastic gradient (improved objective):

$$\nabla_{\theta_g} \frac{1}{m} \sum_{i=1}^m \log(D_{\theta_d}(G_{\theta_g}(z^{(i)})))$$

#### end for

### Fei-Fei Li, Ehsan Adeli

Some find k=1 more stable, others use k > 1, no best rule.

Followup work (e.g. Wasserstein GAN, BEGAN) alleviates this problem, better stability!

### Generative Adversarial Nets: Convolutional Architectures

Generator is an upsampling network with fractionally-strided convolutions Discriminator is a convolutional network

Architecture guidelines for stable Deep Convolutional GANs

- Replace any pooling layers with strided convolutions (discriminator) and fractional-strided convolutions (generator).
- Use batchnorm in both the generator and the discriminator.
- Remove fully connected hidden layers for deeper architectures.
- Use ReLU activation in generator for all layers except for the output, which uses Tanh.
- Use LeakyReLU activation in the discriminator for all layers.

### Summary: GANs

Don't work with an explicit density function

Take game-theoretic approach: learn to generate from training distribution through 2-player game

Pros:

- Beautiful samples!

Cons:

- Trickier / more unstable to train
- Can't solve inference queries such as p(x), p(z|x)

Active areas of research:

- Better loss functions, more stable training (Wasserstein GAN, LSGAN, many others)

Lecture 13 - 130

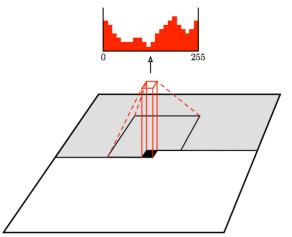

<u>May 16, 2024</u>

- Conditional GANs, GANs for all kinds of applications

### **Denoising Diffusion Models**

### Learning to generate by denoising

Denoising diffusion models consist of two processes:

- Forward diffusion process that gradually adds noise to input
- Reverse denoising process that learns to generate data by denoising

Reverse denoising process (generative)

Forward diffusion process (fixed)

Noise

Data

### Generative vs. Self-supervised Learning

Left: Drawing of a dollar bill from memory. Right: Drawing subsequently made with a dollar bill present. Image source: <u>Epstein, 2016</u>

Learning to generate pixel-level details is often unnecessary; learn high-level semantic features with pretext tasks instead (self-supervised learning)
