

# Convolutional Neural Networks for Visual Recognition

## Lecture 1 - Overview

# Today's agenda

- A brief history of computer vision
- CS231n overview

# Today's agenda

- A brief history of computer vision
- **CS231n overview**

# Convolutional Neural Networks for **Visual Recognition**

A fundamental and general problem in Computer Vision, that has roots in Cognitive Science

Biederman, Irving. "Recognition-by-components: a theory of human image understanding." *Psychological review* 94.2 (1987): 115.

# Image Classification: A core task in Computer Vision

There are many visual recognition problems that are related to image classification, such as object detection, image captioning, semantic segmentation, visual question answering, visual instruction navigation, scene graph generation

# Convolutional **Neural Networks** for Visual Recognition

Hierarchical computing systems with many “layers”, that are very loosely inspired by Neuroscience

# Last time: Neural Networks

# Convolutional Neural Networks for Visual Recognition

A class of Neural Networks that have become an important tool for visual recognition

# Core ideas go back many decades!

The **Mark I Perceptron** machine was the first implementation of the perceptron algorithm.

The machine was connected to a camera that used 20×20 cadmium sulfide photocells to produce a 400-pixel image.

recognized  
letters of the alphabet

Some kind of game or fight. Two groups of two men? The man on the left is throwing something. Outdoors seemed like because I have an impression of grass and maybe lines on the grass? That would be why I think perhaps a game, rough game though, more like rugby than football because they pairs weren't in pads and helmets, though I did get the impression of similar clothing. maybe some trees? in the background.

# IEEE PAMI Longuet-Higgins Prize

Award recognizes ONE Computer Vision paper from **ten years ago** with **significant impact on computer vision** research.

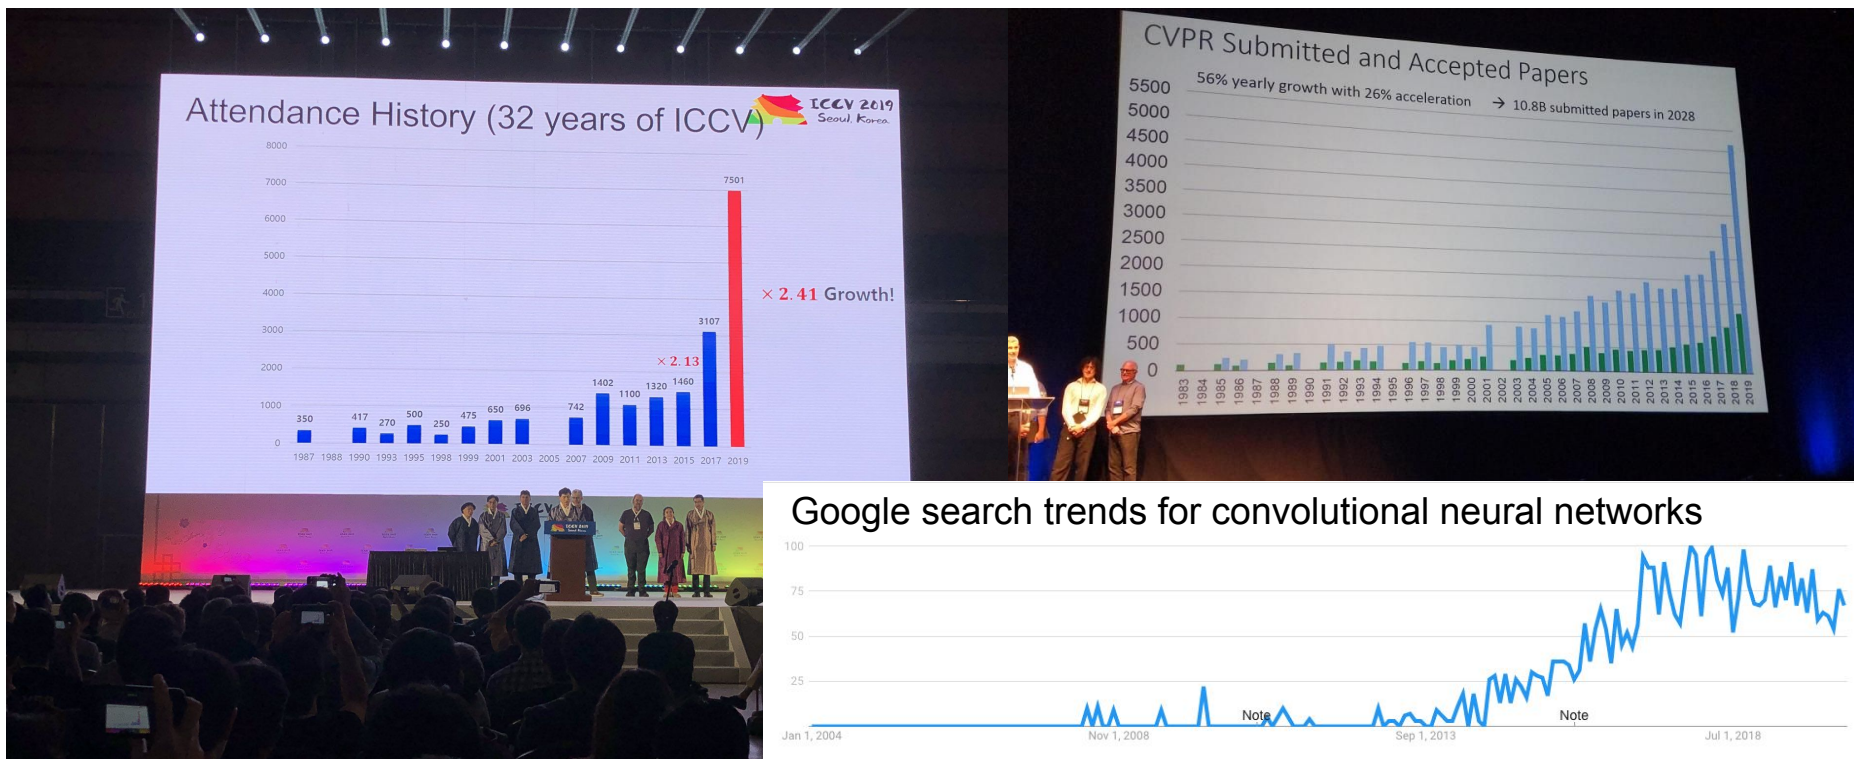

In 2019, it was awarded to the 2009 original ImageNet paper

That's Fei-Fei

# Why is this such a large class?

# Logistics

# Lectures

## Live Zoom Webinar

- Links will be shared via email and canvas: [cs231n.stanford.edu](https://cs231n.stanford.edu)
  - Due to security reasons, please do not share zoom links publicly
- **Tuesdays and Thursdays between 1pm to 2:20pm**
  - To watch the lectures, you must login to Zoom using your SUNETID@stanford.edu accounts.
- Q/A functionality - a dedicated TA will answer questions live
- All lectures will be recorded and uploaded to [Canvas](#)
- 2 new lectures were added last year.
- 2 more new lectures will be added this year.

# Friday Discussion Sections

(Most) Fridays 11:30am - 12:30pm

Hands-on tutorials, with more practical detail than main lecture

We may not have discussion sections every Friday, check our [syllabus!](#)

Zoom meetings (not webinars) - there will be more student-student interactions

This Friday: Python / numpy / Google Cloud (Presenter: Rachel Gardner)

# Piazza

For questions about midterm, projects, logistics, etc, use [Piazza!](#)

SCPD students: Use your @stanford.edu address to register for Piazza; contact [scpd-customerservice@stanford.edu](mailto:scpd-customerservice@stanford.edu) for help.

# Office Hours

Will occur through Nooks

- Join Nooks and add your name to a queue for a particular office hours
- TAs will take you into a private room for 1-1 conversations when it's your turn
- [Office hours will be listed here by Friday!](#)

# Optional textbook resources

- [Deep Learning](#)
  - by Goodfellow, Bengio, and Courville
  - Here is a [free version](#)
- Mathematics of deep learning
  - Chapters 5, 6 7 are useful to understand vector calculus and continuous optimization
  - [Free online version](#)
- Dive into deep learning
  - An interactive deep learning book with code, math, and discussions, based on the NumPy interface.
  - [Free online version](#)

# Grading

All assignments, coding and written portions, will be submitted via [Gradescope](#).

## **New since last year: an auto-grading system**

- A consistent grading scheme,
- Public tests:
  - Students see results of public tests immediately
- Private tests
  - Generalizations of the public tests to thoroughly test your implementation

# Grading

3 Problem Sets: 10% + 20% + 20% = 50%

Take home 24hr Midterm Exam: 15%

Course Project: 35%

- Project Proposal: 1%
- Milestone: 2%
- Video presentation: 10%
- Project Report: 22%

Participation Extra Credit: up to 3%

Late policy

- 4 free late days – use up to 2 late days per assignment
- Afterwards, 25% off per day late
- No late days for project report

# Overview on communication

Course Website: <http://cs231n.stanford.edu/>

- Syllabus, lecture slides, links to assignment downloads, etc

Piazza:

- Use this for most communication with course staff
- Ask questions about homework, grading, logistics, etc
- Use private questions if you want to post code

Gradescope:

- For turning in homework and receiving grades

Canvas:

- For watching lecture videos

Zoom:

- For watching live lectures and discussion sections and for participating!

# Assignments

All assignments will be completed using Google Colab

Assignment 1: Will be out Friday, due 4/16 by 11:59pm

- K-Nearest Neighbor
- Linear classifiers: SVM, Softmax
- Two-layer neural network
- Image features

# Pre-requisite

## Proficiency in Python

- All class assignments will be in Python (and use numpy)
- Later in the class, you will be using Pytorch and TensorFlow
- [A Python tutorial available on course website](#)

College Calculus, Linear Algebra

No longer need CS229 (Machine Learning)

# Google Cloud

We have Google Cloud credits available for projects

- Not for HWs (only for final projects)

We will be distributing coupons to all enrolled students who need it

See our tutorial here for walking through Google Cloud setup:

<https://github.com/cs231n/gcloud>

# Collaboration policy

We follow the [Stanford Honor Code](#) and the [CS Department Honor Code](#) – read them!

- **Rule 1:** Don't look at solutions or code that are not your own; everything you submit should be your own work
- **Rule 2:** Don't share your solution code with others; however discussing ideas or general strategies is fine and encouraged
- **Rule 3:** Indicate in your submissions anyone you worked with

Turning in something late / incomplete is better than violating the honor code

# Learning objectives

## Formalize computer vision applications into tasks

- Formalize inputs and outputs for vision-related problems
- Understand what data and computational requirements you need to train a model

## Develop and train vision models

- Learn to code, debug, and train convolutional neural networks.
- Learn how to use software frameworks like TensorFlow and PyTorch

## Gain an understanding of where the field is and where it is headed

- What new research has come out in the last 0-5 years
- What are open research challenges?
- What ethical and societal considerations should we consider before deployment?

# What you should expect from us

Fun.

- We will discuss fun applications like image captioning, visual question answering, style transfer

# What we expect from you

## Patience.

- This is new for us as much as it is new for you
- Things will break; we will experience technical difficulties
- Bear with us and trust us to listen to you

## Contribute

- Build a community on slack
- Help one another - discuss topics you enjoy
- [Give us \(anonymous\) feedback](#)

# Why should you take this class?

Become a vision researcher (an incomplete list of conferences)

- Get involved with [vision research at Stanford](#): apply [using this form](#).
- [CVPR 2020 conference](#)
- [ICCV 2020 conference](#)

Become a vision engineer in industry (an incomplete list of industry teams)

- [Perception team at Google AI](#)
- [Vision at Google Cloud](#)
- [Vision at Facebook AI](#)

General interest

# Syllabus

## Neural Network Fundamentals

Data-driven learning  
Linear classification & kNN  
Loss functions  
Optimization  
Backpropagation  
Multi-layer perceptrons  
Neural Networks

## Convolutional Neural Networks

Convolutions  
Pytorch 1.4 / Tensorflow 2.0  
Activation functions  
Batch normalization  
Transfer learning  
Data augmentation  
Momentum / RMSProp / Adam  
Architecture design

## Computer Vision Applications

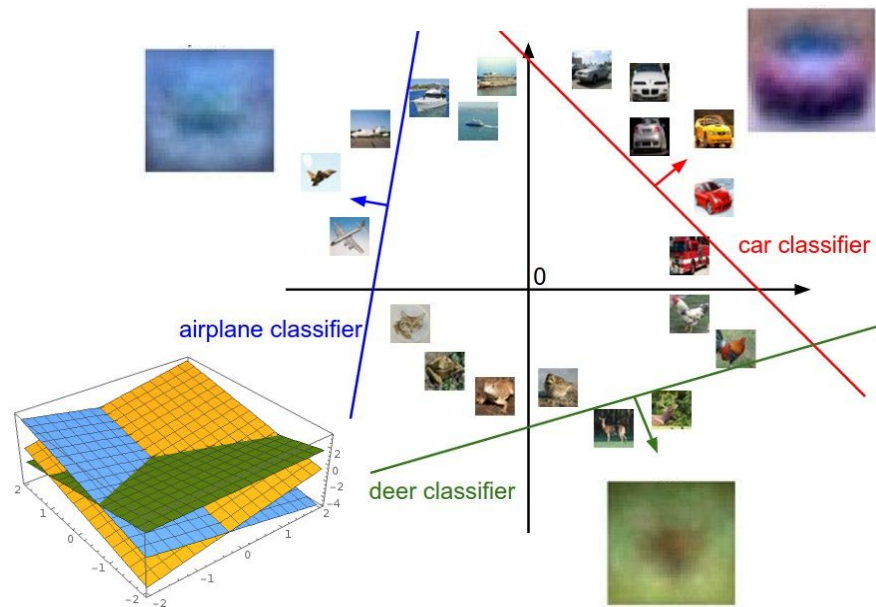

RNNs / LSTMs / Transformers  
Image captioning  
Interpreting neural networks  
Style transfer  
Adversarial examples  
Fairness & ethics  
Human-centered AI  
3D vision  
Deep reinforcement learning  
Scene graphs  
Self-supervised learning

# Next time: Image classification

k- nearest neighbor

Linear classification

Plot created using [Wolfram Cloud](#)
